The best-selling premier rap grime beat is back. ‘The Big Man’ features a distinctive left-hand bounce and left-field samples. What sets this one apart from the rest is the combination of the very personal nature of the vocals with the big, 808-driven sound. The AudioScience SoundBooth IP is the perfect tool for any professional audio recording studio. It provides a high-quality audio interface for use with any audio recording application. The SoundBooth IP has five inputs (including the power supply) and features a built-in 24-bit/96 kHz A/D converter with up to 96 kHz sampling frequency. The SoundBooth IP has two ADAT SDI outputs and two XLR balanced outputs. The SoundBooth IP is equipped with a S/PDIF input, which allows for direct connection to any audio network or multi-channel audio processor. The SoundBooth IP has an optional footswitch, which allows for manual control of volume and bypass of recording. The S/PDIF input also features a 1/8” stereo audio connector. The SoundBooth IP has a unique built-in “Active Noise Reduction” mode. When this feature is active, a constant-level white noise is continuously injected into the signal path, regardless of the input volume level. This keeps the recording pristine, even when the input level is low. The SoundBooth IP also provides an optional Wi-Fi radio receiver, which allows for the connection of wireless microphones. The Griffin Microphone Stand is a compact and portable sound reinforcement system designed for use with the Griffin USB and XLR microphones. The Griffin Microphone Stand can be adjusted to suit a wide variety of configurations. The Griffin Microphone Stand holds the microphone in the centre of a row of microphones to create a line array. The microphone stand can also be rotated to accommodate various microphone types, such as shotgun, diffuse or over the shoulder. Griffin Microphone Stands are sold individually and in sets of two. The Griffin Microphone Stand set includes all the standard attachments for each microphone. The CLEAR accessor releases your GoPro from your housing, allowing you to freely rotate, tilt, and move the camera as you please. This is especially useful when mounted to a sled, as it allows you to move the GoPro in any direction. You can also operate the GoPro 82157476af
